Commodity Futures Trading Commission Futures and Options trading has large potential rewards, but also large potential risk. You must be aware of the risks and be willing to accept them in order to invest in the FOREX, futures and options markets. The past performance of any trading system or methodology is not necessarily indicative of future results.

Recommendations To Help You Excel

The following recommendations are to help you get the best and most profitable experience from your use of this software and trading Forex in general.

Please consider following these recommendations as we have reviewed them and utilized them for years successfully – including hundreds of other traders we work with.

Which Forex Broker Should You Use?

While you can use any Forex broker you prefer that offers Meta Trader 4/5 platform. For best results we highly recommend using the following broker that works well with automated trading systems, promptly handles withdrawals, and offers good support.

Recommended #1: It is Blaze Markets you can find them here (open PRO account, MT4):

<https://www.blazemarkets.com>

Recommended #2: If you prefer MT5 platform please consider using:

<https://www.motivemarkets.com>

Blaze Markets is a broker created by traders that got tired of dealing with poorly run brokerages. They wanted to create one that supports robot trading with optimal conditions. There are very fast execution speeds and competitive pricing.

After signing up download and install Meta Trader 4/5, which is provided free by them. (Please choose 200 leverage).

Account Type to Use

Pro account type is preferred which offers lower spreads. The minimum recommended deposit is \$1,000. Note, lower account sizes are possible, but pose more risk while trading of losing the funds, but greater gains % wise. The ideal minimum is \$5,000 to \$10,000.

Use A VPS And Everything Will Run Even If Your Computer Is Off...

You can avoid leaving your computer on and access your platform from any mobile device using a virtual server. We highly recommend using a VPS always for trading. A VPS can make a huge difference in success because of its reliability and redundancy.

Click the link below to get your own VPS. It will be a windows VPS. The lower price plan is fine. It works like a computer, and they provide instructions on how to connect to it. Once in it you'll be able to use it like a normal computer. (You can use this with your Mac).

[Click Here for VPS Recommendations](#)

Want Someone to Install And Setup The Robot For You?

Don't feel like setting up the software or prefer someone else to do it for you? Not a problem, click the link below and have a pro do it for you.

[Click Here to Have A Pro Install It For You - www.fxinstall.com](http://www.fxinstall.com)

Is Your License Activated?

If you haven't already, please go back to member's area and scroll down to the section where you must activate your license with your broker MT4/MT5 account number.

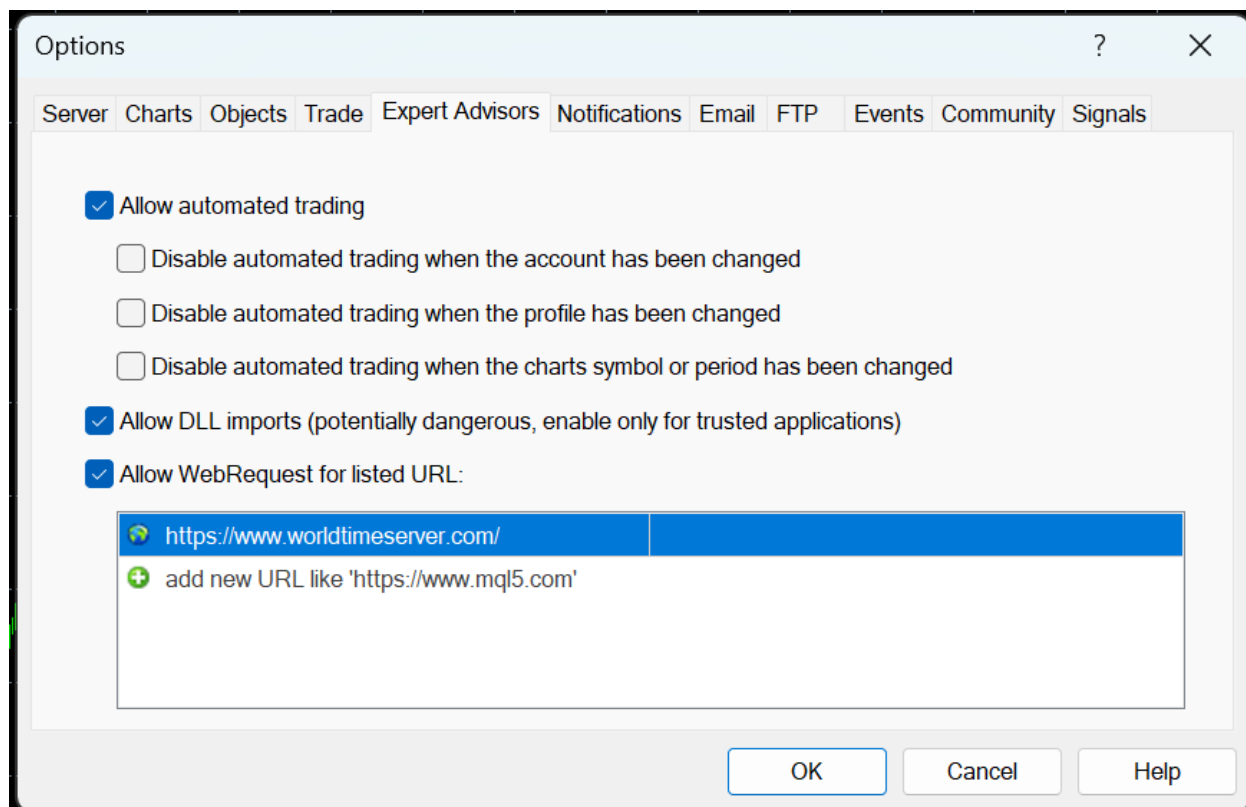

This is necessary to allow the software to run on your account. It can be changed anytime if you choose to switch accounts or brokers.

[Click Here To Go To Members Area](#)

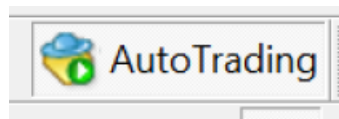

Expert Advisor installation

1. Install Meta Trader 4/5 platform from your broker – they provide it free (recommendations at earlier part of this guide).

2. You will need to do the following configuration. At the top of MT4/MT5, Click Tools>Options>Expert Advisors. Check the same boxes as indicated below, and then click + next to add new URL and enter: <https://www.worldtimeserver.com/> - press enter, then click OK at the bottom.

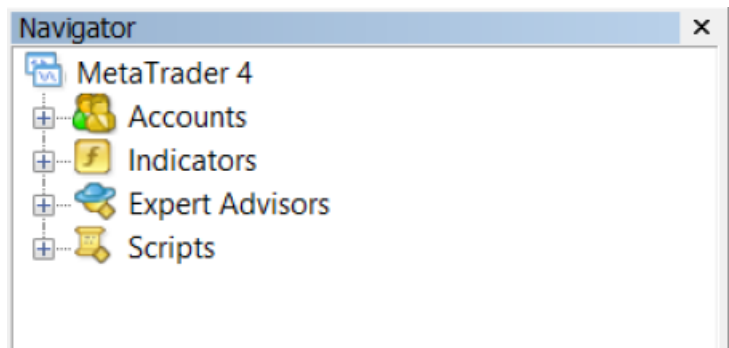

3. On the top of Meta Trader 4/5 make sure the AutoTrading / Automated Trading is pushed in and GREEN, click it, if it's RED.

4. To install **Gold Breaker Robot** you will need to load the **GoldBreaker.ex4/.ex5** file into the platform's data folder: At the top left of the platform click File>Open Data Folder>MQL4/5>Experts> and place the **GoldBreaker.ex4** file there, close the folder. **Now restart the platform (close it and open it again).** If you are using Meta Trader 5, then use the **GoldBreaker.ex5** file instead.

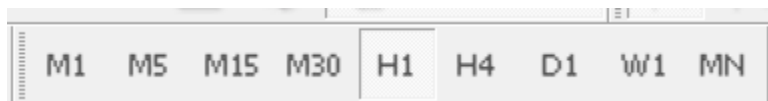

5. You should see Navigator window in your Meta Trader platform on the middle left with **Gold Breaker** in it (if you don't see it please click the + sign next to Expert Advisors):

6. Now we need to open the window within Meta Trader for the currency pair that **Gold Breaker** will be trading on. To do this click the **File** button at the top left, then click on **New Chart**, then you will look for **XAUUSD** and click it to open. OR right click on the PAIRS in Market Watch (box on the left top) and click Chart Window for **XAUUSD** from the list.

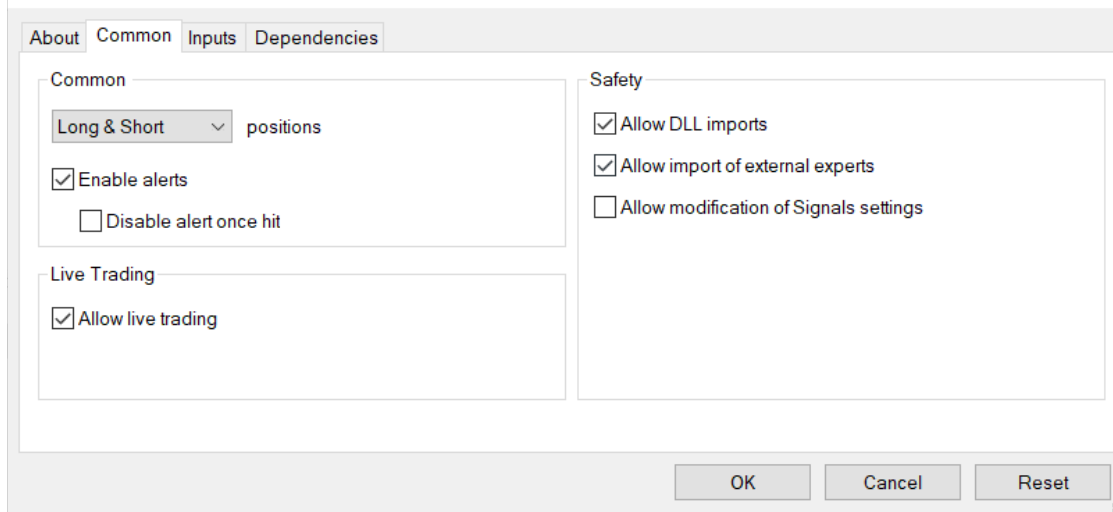

If the pair is missing, simply right click and click SHOW ALL in the box – note some brokers don't offer **XAUUSD**, if your broker does not you may need to switch. If your broker requires a pair suffix you'll need to use the pair for it. For example, **XAUUSD.pro** instead of **XAUUSD**. Most brokers don't require it.

Once you open the chart, click on “H1” button towards the top of the screen to adjust the timeframe of that chart. This means each candlestick bar on the chart represents 1 hour.

7. Now click **Gold Breaker** from the Navigator window on the left, and drag it onto the chart you opened for **XAUSUD** or you can right click the **Gold Breaker** name and choose “Attach to a chart” – it will attach to the chart in focus.

8. Once you attach **Gold Breaker** to the chart window, a box will appear like the following below. Click **Common** then make sure the check marks match the following (then click **Inputs**):

9. Under the inputs section, most of the inputs should NOT be touched. You will only need to adjust **receipt** and **max allowed drawdown**.

Variable	Value
Receipt	Enter Your Receipt Here
Adjustment for Infopanel size	1.0
update infopanel during testing	false
----- Settings -----	
setSL_TP_After_Entry	false
Use Virtual Expiration	true
BaseMagicnumber	9889
Comment for trades	GOLD BREAKER
NFP_FILTER	----- NFP Filter -----
EnableNFP_Filter	true
NFP_CloseOpenTrades	true
NFP_ClosePendingOrders	true
----- LotSize Settings -----	
manually set balance to use (if > 0)	0.0
Max Allowed Drawdown	30.0
Use Equity Instead of Balance	false

- For **Receipt**: Enter under value the receipt / transaction reference we emailed you with your purchase. You must also activate it for the account before entering it.
- For **Max Allowed Drawdown**: Set your desired risk. This can be done by changing the “Max Allowed Total Drawdown” parameter. For low risk, set it to 15. For medium risk, set it to 30. For high risk, set it to 50. If you have more experience, you can experiment with other risk numbers at your own discretion.

10. That’s it, we do not recommend touching any other settings – unless you are experimenting and have experience with testing. **Once done, click OK in the window (not save or load)**. If everything is OK and loaded properly you will see the text **Gold Breaker** with a smiley emoticon or blue hat on the top right of the chart.

The configuration is finished! Let it run on its own 24/7 and do NOT touch it. A VPS is HIGHLY Recommended.

On the next page you will find a description of all the settings for your reference.

Description of Input Settings

- **Receipt** -> this was emailed to you when you signed up, you must activate it first
- **Adjustment for Infopanel size** -> in case of 4K display, set value to "2"
- **update infopanel during testing** -> disabled for faster backtesting
- **SetSL_TP_After_Entry** -> enable only if your broker doesn't allow pending orders with SL and TP
- **Use Virtual Expiration** -> enable only if your broker doesn't allow pending order with expiration date
- **BaseMagicNumber** -> the base magic number that will be used for all strategies (individual strategies will add a number to this value)
- **Comment for trades** -> the comment to be used for the trades
- **Manually set balance to use** -> here you can force a fixed balance value, on which the lotsize will be calculated. This will override the actual balance of the account when calculating risk
- **Max Allowed Drawdown** -> the preferred maximum allowed total drawdown (in %). The EA will then determine lotsize based on the historical max DD of the EA
- **Use Equity instead of Balance** -> use Equity of the account to calculate all lotsize values instead of the balance
- **EnableNFP_Filter** -> turn the NFP filter on or off (news filter)
- **NFP_CloseOpenTrades** -> force the EA to close all open trades when NFP starts (X minutes before NFP)
- **NFP_ClosePendingOrders** -> force the EA to delete all pending orders when NFP starts (X minutes before NFP)
